

Businesses Find Safety and Security in Canton

SecureData 365, a World Class Datacenter in Canton Brings Local, Regional, and National Businesses Technology Peace-of-Mind

You may not think of Canton as the heart of technology for the region's top organizations and "Fortune" companies from across the East Coast. Canton is the home to SecureData 365, a premier, state-of-the-art data center. What exactly is a data center? Organizations look for a variety of technology needs including housing critical business applications and servers, backup and storage, backup and co-location, as well as cloud solutions.

Designed from the ground-up to deliver unwavering power and connectivity thanks to multiple redundant systems, SecureData 365 offers the stability and reliability required by enterprise clients. The region's Fortune 2000 organizations are quickly recognizing that the unique combination of facility, people, and service offerings make SecureData 365 the preeminent choice for data center services in the Midwest. Additionally, SecureData 365 boasts SSAE 16 status, which is a third party audit endorsing the center as a safe and secure data center, pro-

viding a high level of service, and controls. -

Today's businesses – all across the country – depend on their critical systems and applications being reliable, dependable, and "always on."

Because when the technology isn't on, neither are today's businesses. It's a fact – businesses fail when systems crash or are unavailable due to a natural disaster.

According to a study by Agility Recovery Solutions:

- Nearly 4 in 5 (78%) of businesses faced with a catastrophe without a contingency plan are out of business within 2 years, and

- 9 in 10 (90%) of companies unable to resume business operations within 5 days of a disaster are

out of business within 1 year.

Whether businesses are seeking a safe location or a redundant location to house their critical systems, SecureData 365 is increasingly being turned

to as the "home" for some of the Nation's top companies, their innovative applications and critical systems.

SecureData 365 was strategically placed in Canton, convenient to the Midwest's largest metro areas, yet far enough away to provide

separation for critical computing systems. Organizations need access as well as a location known for a lack of natural disasters that can knock power out for hours, days, or weeks. While we've taken great strides to ensure our center never goes down, with

numerous generators and redundant systems, Canton is an appealing destination for East Coast businesses that, as New York Governor Cuomo explained, are facing a "100 year storm every two years."

For businesses here in Canton, SecureData 365 is here to help your business capitalize on the opportunities and efficiencies available today. With numerous ultra-fast broadband networks available in our region, local businesses can capitalize on the multiple fiber connections that run through SecureData 365 to improve their business operations in a myriad of ways.

SecureData 365 can help your business improve the reliability of your systems and help make you more competitive.

To find out how we can help secure your business systems, create efficiencies and cost savings, contact SecureData 365 (info@securedata365.com) to schedule a tour of the facility.

Designed from the ground-up to deliver unwavering power and connectivity thanks to multiple redundant systems, SecureData 365 offers the stability and reliability required by enterprise clients.
